Subject: RIN 2590-AA53? obstacles or incentives?

FHFA General Counsel Alfred M. Pollard:

To think that the oil industry is subsidized hugely and large corporations have loop holes to reduce their tax obligations and many examples of how these policies negatively impact our economy, and industry lobbies government to create obstacles for individuals to invest in new energy industry and in their own lives. Why is this? Fannie and Freddie mac are meant to help people grow their lives and be economically stronger, actually make citizens more financially capable – building neighborhoods and communities, reducing energy costs, stabilizing utility costs, and benefiting from fair tax rebates.

The disaster brought on this country from unfair benefits and opportunity to large corporations is devastating and will not end until the tide turns and individuals are allowed to participate in the economy and benefit at least as much as the lobbyist-laden industries. In many areas of the country, including Silver City NM, energy improvements reliably increase the value of a home and improve peoples lives.

What can you do? Start helping to rebuild this economy by making wise decisions to help working Americans; getting jobs by growing clean energy industries and supporting the desire of working people to own affordable safe comfortable homes. A good decision is to support and grow PACE nation-wide Now.

thank you...
