

I am writing to urge that the PACE program be implemented in Grant County NM.

It is so important for environmental health and energy independence that we increase the use of safe, sustainable sources of energy, including solar. This program would support that in a major way, especially in a county like this where income is low and environmental awareness is high.

I myself would most likely avail myself of the program if it were available here, as I don't have the funds to go solar, but I do have the desire to do so.
